

Sudzer® FM

Belanger's Sudzer® FM is a foaming application arch unlike any other. Available flashing LED-illuminated nozzle housings attract attention, while standard LED foam illumination – in your choice of red, green or blue – supports service announcement or site branding. And, the center branding panel offers the ideal showcase for your custom logo.

The perfect companion to the Sudzer® BL bubble arch, the Sudzer FM is optimized for foaming delivery of presoaks, waxes and sealants, while using as little as one oz. per car, to ensure profitable operation. With presoak, that's a chemical cost as low as 20 cents per car!

In fact, the Sudzer® FM is 'built for profit' – it delivers the lighted foam 'show' customers want, total coverage that ensures product performance, and low cost of operation you need – a true 'win-win-win.'
